Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

| Patent No. 6743769
| GENERAL INFORMATION:
| APPLICANT: Yeaman, Michael R.
| APPLICANT: Shen, Alexander J.
| TITLE OF INVENTION: Metapeptides
| TITLE OF INVENTION: Metapeptides
| FILE REFERENCE: 66742-025 (RR5614)
| CURRENT APPLICATION NUMBER: US/09/525,269A
| CURRENT FILING DATE: 1998-02-18
| PRIOR FILING DATE: 1998-02-18
| NUMBER OF SEQ ID NOS: 39
| SEQ ID NO 10
| LENGTH: 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        APPLICANT: Steman, Michael R.
APPLICANT: Shen, Alexander J.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 12, Application US/08233203
Patent No. 5409898
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Darveau, Richard P.
APPLICANT: Cosend, Wesley L.
TITLE OF INVENTION: INFECTIONS CAUSED BY ORGANISM SENSITIVE TO BETA-LACTAM
TITLE OF INVENTION: ANTIBIOTICS
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 45; DB 1; Length 20;

GENERAL INFORMATION:
APPLICANT: Keith Weinstock et al
TITLE OF INVENTION: NUCLBIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANE
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.132
CURRENT FILING DATE: 1999-02-12
PRIOR APPLICATION NUMBER: US 60/074,725
PRIOR APPLICATION NUMBER: US 60/074,725
PRIOR RELING DATE: 1998-02-13
PRIOR FILING DATE: 1998-08-13
PRIOR FILING DATE: 1998-08-13
NUMBER OF SEQ ID NOS: 28208
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GENERAL INFORMATION:

GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Academisch Ziekhuis Bij De Universiteit
TITLE OF INVENTION: No. 6624140el synthetic peptides with antimicrobial and endotoxi
TITLE OF INVENTION:
PILLE REFERENCE: Q57666
CURRENT APPLICATION NUMBER: US/09/493,211
CURRENT PILING DATE: 2000-01-28
PRIOR RELING DATE: 1997-07-31
NUMBER OF SEQ ID NOS: 9
SOFTWARE: Patentin version 3.0
SEQ ID NO 1
LENGTH: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 15, Application US/09876904A

Fublication No. US20030072794A1

GENERAL INFORMATION:
TITLE OF INVENTION: ENCRPSULATION OF PLASMID DNA (LIPOGENES TW) AND THERAPEUTIC
TITLE OF INVENTION: AGENTS WITH NUCLEAR LOCALIZATION SIGNAL/FUSGENIC PEPTIDE
TITLE OF INVENTION: CONJUGARE INTO TARGETED LIPOSOME COMPLEXES
FILE REFERENCE: TB-2002.00
FURBENT PAPLICATION NUMBER: US/09/876,904A
CURRENT PAPLICATION NUMBER: US 60/210,925
FRIOR FILING DATE: 2001-06-09
NUMBER OF SEQ ID NOS: 629
SOFTWARE: Patentin Ver. 2.1

TITLE OF INVENTION: Colon and Colon Cancer Associated Polynucleotides and Polypeptide
FILE REFERENCE: PADOSPI

CURRENT APPLICATION NUMBER: US/10/106,698

CURRENT FILING DATE: 2002-03-27

PRIOR APPLICATION NUMBER: US 60/157,137

PRIOR FILING DATE: 1999-09-29

PRIOR FILING DATE: 1999-11-03

PRIOR FILING DATE: 1999-11-03

NUMBER OF SEQ ID NOS: 8564

SSCY ID NO 5301

LENGTH: 40
                                                                                                                                                                                                                                                                                                                                                                                    RESULT 41
